## **OrgaTech supports the establishment of functional specifications**

WFG (Association for Business Development, Unna) has taken the decision to support the processes of project accomplishment by an integrated software and to realise the necessary organisational process adaptations.

In a first step the processes of the existing project handling were documented in order to be able to transfer them into the new system after their organisational adaptations. The objective of the project "Process definition of WFG, Unna" was: the transparent presentation of the project execution of WFG.

In order to select the new software on the basis of the existing or the adapted processes and functions these processes were analysed by applying the well-proven process management method of OrgaTech GmbH.

This method makes sure a transparent presentation of the processes in respect of organisational aspects and of the used IT-systems.

For further information please contact Mr. Bernhard Kurpicz, OrgaTech Unternehmensberatung, or Dr. Michael Dannebom, Wirtschaftsförderungsgesellschaft für den Kreis Unna mbH (WFG).
