
Successful accomplishment of a workshop dealing with the topic "Requirements management according to the V-Model XT"

From 3rd to 9th June 2005 OrgaTech GmbH Lünen held a workshop in the German Institute for Medical Documentation and Information - „Deutsches Institut für Medizinische Dokumentation und Information (DIMDI). The topic: Requirements management according to the V-Model XT.

The objective of this workshop was to illustrate the content and the scope of the requirements management for a complex software project to a team of health professionals and pharmacists.

In order to ensure a workshop preparation being in line with the target group an interview was held with every participant. So the workshop could be adapted in an optimal way to the requirements of the participants.

Besides the imparting of basic knowledge concerning requirements management the embedding of this knowledge into the process world of a software project was picked out as a central theme. The structure of the workshop focused on the requirements of the V-Model XT. So the participants were not just instructed in the subject matter but they gained as well some knowledge regarding methodological and structural demands.

The workshop included a multitude of practical exercises. So the participants gained not just theoretical knowledge but they had as well the opportunity of putting it into practice exemplarily in some exercises based on their specific project.

If you have any questions please contact Mr. Bernhard Kurpicz.
